Flea Facts

The flea lifecycle

Flea infestations can begin long before you see biting, jumping bugs.

FLEA EGGS

fall quickly onto your carpet, furniture and yard

FLEA LARVAE

head for the dark places in your home to feast

FLEA PUPAE

grow in a cocoon for 8-9 days ... waiting to emerge

ADULT FLEAS

Bite your pet and will wreak havoc in your home and for your family

Hi, I alone can lay 50 eggs in ONE DAY!

By the way, all of these eggs are in your carpets, floor boards and outside... every day!

We see only 1 in 100 fleas on our pet, yet imagine being bitten 400 times per day, and that's only by one flea ...

Please treat your pet and your home

One adult female flea can lay as many as 50 eggs a day.

50 eggs

Just one flea can bite your pet 400 times a day.

400 bites

! = 5 bites

Mum, have you been bitten by something about 400 times a day?

Fleas do!

That's why Fleas drive us mad!
